Sub: Prof. Abhishek Sharma's visit to the School of Chemical and Biomedical Engineering, Nanyang Technological University, Singapore

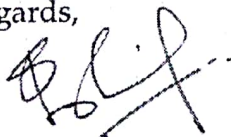

Dear Prof. Sharma,

Thanks for showing interest in visiting the School of Chemical and Biomedical Engineering at Nanyang Technological University (NTU), Singapore and particularly my research laboratory in NTU. Since we both work in the area of conversion of biomass to fuels, via high temperature pyrolysis and gassification processes, I shall be glad to be your host during this visit. My research group members will give an overview of the research in my group and will be delighted to know more about specific projects you are working on. The tentative agenda for the visit during October 10th to 16th, 2016 would be as follows:

1. Interactions with my research team to screen potential areas related to biofuels and bioenergy for collaboration
2. Seminars to UG and PG students. The relevant topics are " Challenges of Gas Processing in Onshore Treatment Facilities" and "Conversion of agricultural residues/ solid wastes into Fuels and Energy"
3. Interactions with NTU faculties to share academic and research experience

Looking forward to your visit.

Best regards,

Samir H. Mushrif
