Respected Sir,

Thanks a lot for considering my request and your prompt reply!!
I will visit you esteemed university in the month of mid-June to July 2019 (Tentative Time period). I will let you know for any requirement.
Once again thank you very much.

Regards,
Dr. Ashish

Dear Dr Ashish Goyal,

it is very delightful to hear about your interest to collaborate with our team.

We are currently investigating the machining induce residual stress in difficult to cut biomaterial, CoCrMo.

So far, our researchers have managed to develop an empirical model to predict the residual stress at different depth for different cutting parameters. The empirical model was developed based on XRD results which the samples should be formed using wire cut. We are looking forward to also studying the effect of WEDM on the additional stress induced during the samples preparation.

Should you be interested in our research, please kindly advise me on the requirement you need to assist officiating your trip.

Best regards,
Saiful
