ABOUT SYMPOSIUM

The production of small-scaled components with complex features is gaining increasing importance of miniaturization of products. As a result, there is a growing need for fast, reliable, mass micromachining of functional components. In contrast to conventional macro-scale machining, the process zone in micro-scaled machining is usually limited to one or several grains of the metallic work-piece materials. This introduces additional complexity that is non-trivial. Consequently, a cutting response in the micro-scale differs significantly from that of its macro-scale counterpart.

Department of Mechanical Engineering, Manipal University Jaipur had organized 1st International Symposium on Micro Machining & Machinability in Dec. 2016. 2nd International Symposium on Micro Machining & Machinability is being conducted on May 26, 2018. Eminent speakers from foreign universities and leading institutes from India like IITs and NITs will be delivering lecture on Micro Machining & Machinability.

Registration Details

Participants	Registration Fee (INR)
