

Sustainable Development Goals (SDGs) Across University Education

In the quest for a sustainable and just world, Manipal University Jaipur is taking significant steps to embed a dedication to impactful education centered around the Sustainable Development Goals (SDGs) across all academic disciplines, ensuring its relevance and applicability for every student. This educational initiative goes beyond traditional learning frameworks, with the objective of equipping future leaders with a comprehensive understanding of global challenges and the necessary tools to drive positive transformation. The incorporation of SDGs into the educational framework is not confined to select courses; rather, it permeates various fields of study. Whether in science and technology, social sciences, business, arts, or humanities, the tenets of sustainable development and the interrelatedness of global issues are highlighted. This methodology enables students to recognize how their academic pursuits contribute to and are shaped by the advancement of the SDGs. Manipal University Jaipur is also promoting experiential learning and the practical application of SDGs. Through initiatives such as projects, internships, and service learning, students are involved in addressing real-world challenges associated with sustainable development. This practical experience serves as a foundation for students to translate theoretical concepts into real-life applications, cultivating a sense of accountability and an awareness of their capacity to instigate change.

The focus on Sustainable Development Goals (SDGs) promotes interdisciplinary collaboration, motivating students to engage across various disciplines to tackle intricate challenges. This cooperative methodology enhances critical thinking and problem-solving abilities, equipping students to confront complex global issues that require innovative solutions. Manipal University Jaipur prioritizes the cultivation of global awareness and cultural competence through education centered on the SDGs. Comprehending global challenges necessitates an understanding of diverse viewpoints and an acknowledgment of the interconnected nature of global issues. Students are encouraged to value cultural diversity and to consider the consequences of their actions within a global framework. Furthermore, SDG-oriented education aims to foster leadership skills and a sense of ethical responsibility among students. Manipal University Jaipur aspires to empower future leaders who are knowledgeable in their respective fields and mindful of their ethical obligations to society and the environment.

List of Programs offered at Manipal University Jaipur, aligned with Sustainable Development Goals:

Sr. No	Name of Program	Stream	Intake	Aligned SDGs
1	M.Arch Landscape	Architecture and Land	12	SDG-15
2	MA International Relations	International Partnership	15	SDG-17
3	M. Tech. in Energy Science & Technology	Clean Energy	18	SDG-7
4	M.Sc Clinical Psychology	Mental Health	19	SDG-3

List of Programs offered at Manipal University Jaipur, aligned with Sustainable Development Goals:

Sr. No	Name of Program	Stream	Intake	Aligned SDGs
1	M.Arch Landscape	Architecture and Land	12	SDG-15
2	MA International Relations	International Partnership	15	SDG-17
3	M. Tech. in Energy Science & Technology	Clean Energy	18	SDG-7
4	M.Sc Clinical Psychology	Mental Health	19	SDG-3

CURRICULUM & SCHEME OF EXAMINATION 2023-2024

M Arch: Two Years Program

Applicable from Academic Session 2023-2024

Year	Course Code	Course Name	L/S	T	P	C	Course Code	Course Name	L/S	T	P	C	
First	First Semester						Second Semester						
	AR 6101	Landscape Design & Communication - I	1	0	0	10	AR 6201	Landscape Design & Communication – II	10	0	0	10	
	AR 6102	Regional Ecology - I	2	2	0	4	AR 6202	Regional Ecology - II	2	2	0	4	
	AR 6103	Site Planning and Landscape Engineering	4	0	0	4	AR 6203	Planting Design	4	0	0	4	
	AR 6104	History of Indian Landscape	2	1	0	3	AR 6204	History of International Landscape	2	1	0	3	
	AR 6105	Landscape Morphology	2	1	0	3	AR 6205	Research in Landscape	2	1	0	3	
	AR 61XX	Elective - I	2	1	0	3	AR 62XX	Elective - II	2	1	0	3	
	AR 6101	Landscape Design & Communication - I	1	0	0	10	AR 6201	Landscape Design & Communication – II	10	0	0	10	
Total			22	5	0	27	Total			22	5	0	27
Second	Course Code	Course Name	L/S	T	P	C	Course Code	Course Name	L/S	T	P	C	
	Third Semester						Fourth Semester						
	AR 7101	Professional Training	-	-	-	16	AR 7201	Thesis	20	0	0	20	
	AR 7102	Pre-Thesis	-	-	-	4	AR 7202	Network and Systems in Landscape Architecture	2	1	0	3	
							AR 7203	Environment Laws & Legislations	3	1	0	4	
Total			-	-	-	20	Total			25	2	0	27

Electives offered as part of the First (AR 61XX) and Second (AR 62XX) Semesters of M. Arch. (Landscape Arch.)

Elective – I (AR 61XX)		Elective – II (AR 62XX)	
AR 6140	Landscape Heritage Conservation	AR 6204	Landscape Performance Evaluation
AR 6141	Settlement History and Development	AR 6241	Understanding Indian Landscape through Visual Arts
		AR 6242	Rural Landscape Planning

**DEPARTMENT OF MECHANICAL ENGINEERING
MANIPAL UNIVERSITY JAIPUR**

M. Tech. in ENERGY SCIENCE AND TECHNOLOGY (EST)

MA6101: APPLIED NUMERICAL ANALYSIS [3 1 0 4]

Mathematical modeling and engineering problem solving: simple mathematical model, conservation laws and engineering. Approximations and round of errors: Accuracy and precision, error definitions, round off errors, truncation errors and Taylor's series. Roots of equations: Bracketing methods, open methods, roots of polynomials applied to engineering problems. Linear algebraic equations: LU decomposition and matrix inversion, special matrices and Gauss Seidel applied to engineering problems. Numerical Differentiation and Integration: Newton Cotes Integration formulas, integration of equations, numerical differentiation applied to engineering problems. Ordinary Differential Equations: RK methods, Boundary value and Eigen value problems. Partial Differential Equations: Finite difference method for elliptic and parabolic equation applied to engineering problems.

2. S.S. Sastry, *Numerical Analysis for Engineers*, McGraw Hill Publication, 2002

ME6170: RESEARCH METHODOLOGY [3 0 0 3]

Mathematical tools for analysis, statistical analysis of data, regression analysis, correlation, concept of best fit and exact fit – Lagrange interpolation, Newton divided difference, least square regression. Design of experiment definition, objective, factorial design, designing engineering experiments, ANOVA, Fractional, Full and Orthogonal Experiments, Taguchi methods for robust design, response surface methodology. Engineering Optimization definition, basics of nonlinear optimization, formulation of optimization problems-examples, Calculus techniques- Lagrange multiplier method – examples, nature inspired optimization techniques i.e. GA, PSO, SA etc., neural network-based optimization, optimization using fuzzy systems. Sampling Techniques: basic terms, Importance of sampling in research, essentials of a good sample, sampling error, standard error of the mean (Standard Deviation), Estimation of parameters, accuracy & precision of estimation, sampling procedure, types/methods of sampling, Central limit theorem, sample size determination, confidence interval and Confidence level. Measurement & Scaling Techniques: - types of data: Primary & Secondary, Types of Scales: Ratio, Interval, Ordinal Nominal. Mapping rules, characteristics of a good measurement, sources of error in measurement. Mathematical modeling of Engineering systems Basic concepts of modeling of Engineering systems – Static and dynamic model – Model for prediction and its limitations, system simulation using tools like MATLAB, SPSS, Minitab, COMSOL, Ansys etc.- validation, use of optimization techniques – Genetic Algorithm, Simulated Annealing. Design of Experiments: Basic principles, Study of completely randomized and randomized block design.

ME6107: NON-CONVENTIONAL ENERGY SOURCES [3 1 0 4]

Introduction: Concepts of pollution and climate change, Sources of environmental pollution. Renewable energy sources: Solar energy, Calculation of solar radiation on horizontal and inclined surfaces, Measurement of solar radiation, Low temperature applications. Solar distillation, Heat pump, Solar refrigerator, Passive space conditioning, Solar thermal power generation, Photovoltaic. Wind energy, Physical and thermo-chemical methods of bioconversion, Biological methods. Hydropower Energy: Present status of hydro power, magneto-hydro-dynamic (MHD) energy conversion. Ocean energy resources, Ocean wave energy conversion and tidal energy conversion. Geothermal Energy: Types of geothermal energy sites, Geothermal power plants. Nuclear Energy. Conversion of energy: Thermal, chemical, and electromagnetic energy into electricity. Renewable energy economics.

ME6108: THERMAL SCIENCE AND ENGINEERING [3 1 0 4]

Introduction: Energy and entropy balances, Equilibrium criteria. Laws of thermodynamics and cycles: Entropy, Thermodynamics power cycles. Conduction heat transfer: Basic concepts of Conduction, Heat diffusion equations, Heat transfer laws, Heat transfer through wall, cylinder, sphere, Optimum thickness of insulation, Conduction with heat source, Unsteady state heat transfer. Convection heat transfer: Boundary layers concept, Dimensionless numbers, Various equations related to heat transfer during laminar and turbulent flow for flat plate as well as pipe flow, Convection with phase change. Condensation and boiling. Radiation heat transfer: Radiation heat transfer basic laws, Shape factor, Shape factor calculations for different bodies, Radiations exchange between surfaces. Heat exchangers and evaporators: LMTD, Effectiveness-NTU methods.

ME6109: ENERGY STORAGE [3 1 0 4]

Need for energy storage, Different modes of energy storage. Potential energy, Pumped hydro storage, KE and Compressed gas system, Flywheel storage, Compressed air energy storage, Electrical and magnetic energy storage, Capacitors, Electromagnets, and Battery storage systems. Chemical Energy storage, Thermo-chemical, Photochemical, Bio-chemical, Electrochemical, Fossil fuels and Synthetic fuels and Hydrogen storage. Lead Acid Battery, Proton exchange membrane Fuel cell/Microbial Fuel cell. SHS mediums, Stratified storage systems, Rock-bed storage systems, Thermal storage in buildings, Earth storage, Energy storage in aquifers, Heat storage in SHS systems, Aquifers storage Phase Change Materials (PCMs), Selection criteria of PCMs, Stefan problem, Solar thermal LHTES systems, Energy conservation through LHTES systems, LHTES systems in refrigeration and air-conditioning systems. Enthalpy formulation, Numerical heat transfer in melting and freezing process. Food preservation, Waste heat recovery, Solar energy storage.

4. Harald Mehling and Luisa F. Cabeza, *Heat and Cold Storage with PCM*, Springer-Verlag Berlin Heidelberg, 2008.

ME6207: ENERGY AUDIT [3 1 0 4]

Energy audit concepts: Energy needs of growing economy, Long term energy scenario, Energy pricing, Energy sector reforms. Energy security, Energy strategy for the future, Energy conservation Act-2001 and its features. Energy Codes And Standards. Measurements: Mass and energy balances: Facility as an energy system, Methods for preparing process flow, Material, and energy balance diagrams. Financial Management: Investment-need, Appraisal and criteria, Financial analysis techniques- Simple payback period, Return on investment, Net present value, Internal rate of return, Cash flows, Risk and sensitivity analysis, Financing options, Energy performance contracts and role of ESCOs. Electricity tariff, Load management, Power factor improvement, Distribution, and transformer losses. Losses in induction motors, Motor efficiency, Factors affecting motor performance, Rewinding and motor replacement issues, Energy efficient motors, Light source, Choice of lighting, Luminance requirements, and Energy conservation avenues. Compressed air system: Types of air compressors, Compressor efficiency, Efficient compressor operation.

ME6208: MEASUREMENT & CONTROL IN ENERGY SYSTEMS [3 1 0 4]

Introduction: Basic measurement concepts, Measurement errors, Calibration, Uncertainty analysis. Thermo-flow measurement: Pressure, Velocity, Force, Temperature, Thermal radiation, Heat flux, Humidity. Measurement of Flow: Flow visualization techniques, Shadowgraph, Schlieren and interferometer. Temperature Measurement: Different principles of temperature measurement, Measurement of heat flux, Calibration of temperature measuring instruments. Air pollution sampling and measurement of particulates, SO_x, NO_x, CO, O₃, Hydrocarbons. Measurement of wind speed, Wind direction. Solar irradiance, Controls of solar and wind energy systems.

4. J. Billingsley, *Essentials of Control Techniques and Theory*, CRC Press, 2009.

ME6209: ENERGY ECONOMICS [3 1 0 4]

System economics: Sector wise consumption of energy resources, Electricity-fuel-transportation, Energy Scenario and supply position of different energy sectors: Indian and international Level – Coal, Oil, Natural Gas, RE, Hydro, Nuclear, Simple payback period, IRR, NPV, Life cycle costing, Cost of saved energy, Cost of energy generated. Energy demand forecasting: Forecasting, Simple and advanced techniques, Econometric approach to energy demand forecasting, Input-output model, Scenario based approach, ANN based approach, Hybrid approach, Energy demand analysis. Economics of demand/load management: Demand side management, cost effectiveness of DSM, Introduction to DSM, concept of DSM, Benefits of DSM, different techniques of DSM, Methods of DSM Load control, DSM planning.

PROGRAM ELECTIVES:

ME6144: ALTERNATIVE FUELS [3 0 0 3]

Introduction: Estimation of conventional fuels, Advantages, and disadvantages of conventional fuels. Need for Alternative fuel, Availability and Comparative properties of Alternative fuels, classification of alternative fuels. Biofuels: Vegetable oil, Biodiesel and ethanol. Engine design modifications required & effects of design parameters on engine behaviour. Alcohols: Methods of using alcohols in CI and SI engines. Legal aspects of blending alternative fuels into conventional liquid fuels. Gaseous Fuels: Production of biogas, Factors affecting biogas formation and Usage of Biogas in SI engine & CI engine. Producer gas and their characteristics. Properties of LPG & CNG as engine fuels, Fuel metering systems, Combustion characteristics, Effect on performance, storage, Emission, Cost and safety. Other alternative fuels: Di-Methyl Ether (DME), Pyrolysis gas/oil, Synthetic gas/oil from plastic, rubber, coal, wood etc., Eco Friendly Plastic fuels (EPF).

4. G. D. Rai, *Non-Conventional Energy Sources*, Khanna Publications, 2011.

ME6145: CARBON AUDIT AND MANAGEMENT [3 0 0 3]

Greenhouse gas emissions from the energy sector and their time trend, Climate change and Other potential impacts of enhanced greenhouse effect caused by anthropogenic emissions primarily from extraction, conversion, transport, storage, and utilization of energy carriers. Carbon footprint, Carbon audit, Carbon management tools and accounting techniques. Life cycle assessment, Policies, Regulations, Protocols and Standards, Carbon credits and Carbon economics the concept of carbon sequestration. Clean development mechanism (CDM) and Its operationalization, Modalities and Procedures for CDM Project. Renewable energy certifications, Renewable purchase obligations, Automobile Emissions, Indian scenario, Impact of automobile pollutants and its abatement.

ME6146: SOLAR ENERGY APPLICATIONS [3 0 0 3]

Solar Radiation: Extra-terrestrial and terrestrial, Radiation measuring instrument, Radiation measurement and Predictions. Solar thermal conversion: Basics, Flat plate collectors-liquid and air type. Classifications of solar thermal collectors. Theory of flat plate collectors, Selective coating, Advanced collectors. Concentrators: Optical design of concentrators, Solar water heater, Solar dryers, Solar stills, Solar ponds, Solar cooling and Refrigeration. Solar thermal power generation and Sterling engine. Solar photovoltaic: Principle of photovoltaic conversion of solar energy. Integration of thermal energy systems with various end use applications. Application of solar thermal technologies: Power generation, Industrial process heating, Water distillation, Refrigeration, Building heating and Cooling, Cooking, Drying Solar cells, Home lighting systems, Solar lanterns, Solar PV pumps, Solar energy storage options. Economic analyses of solar thermal energy systems, Life cycle assessment of solar thermal energy systems.

5. S. Sukhatme and J Nayak, *Solar Energy: Principles of Thermal Collection and Storage*, (3e), McGraw Hill Education, 2008.

ME6147: ENERGY CONVERSION & STORAGE [3 0 0 3]

Introduction and basic definitions, Types and forms of energy, Energy balances, Energy production via cyclic processes, Energy conversion emphasizing on thermal efficiency of the conversion processes, Energy storage techniques including thermal energy storage by sensible and latent heats, Energy Conservation, Energy coupling.

References:

1. Yasar Demirel, *Energy, Production, Conversion, Storage, Conservation and Coupling*, Springer, 2012.
2. D. Yogi Goswami and Frank Kreith, *Energy Conversion*, (2e), CRC press, 2017.

ME6247: ELECTRICAL ENERGY TECHNOLOGY & MANAGEMENT [3 0 0 3]

Transformers: Parallel operation, Auto transformers DC machines, Generator characteristics, Motor characteristics applications. Synchronous machines, Permanent magnet alternators, Induction machines. Power factor correction: Concept of power factor and reactive power, Causes and effects of low power factor, Advantages of improved power factor, Energy saving by power factor. Transmission line: Power flow study, power factor improvement, faults on power systems, Symmetrical components, Introduction to HVDC systems. Controlled rectifiers, Choppers, Inverters, Voltage regulators and Cyclo converters. Speed control of dc motors, converter, fed and chopper fed control. Speed control of AC motors, Inverter fed and AC voltage controller, fed schemes. Wind-driven induction generators, Grid connected photo-voltaic systems, Steady state performance, Integration issues, Principles of energy auditing.

ME6248: FUNDAMENTALS OF SOLAR PHOTOVOLTAICS [3 0 0 3]

Quantum mechanics, Crystals structures, Atomic bonding, Types of semiconductors, Energy band diagram, p-type and n-type semiconductors, Doping and Carrier concentration, Diffusion and Drift of carriers, Continuity equation, P-N junction and Its properties, Dark I-V equation of P-N junction, Junction under illumination, Solar cell and Solar PV modules, Issues with solar PV modules, Bypass diode and Blocking diode, Applications of solar PV systems, Electronic circuits in PV, Design of solar PV systems, Battery sizing, PV panel sizing, Inverter sizing, Solar lanterns, Water pumping application, Home lighting application, Cathodic protection, Remote lighting. Applications of Photovoltaic for power generation from few watts to megawatts.

ME6249: WASTE TO ENERGY [3 0 0 3]

Impact of waste on environment and classification of pollution. Types and sources of solid and hazardous wastes, Need for solid and hazardous waste management, Recycling and reuse, handling and Segregation of wastes. Energy from waste: Production, characterisation, and classification of waste as fuel– Biomass, Industrial waste, Municipal solid waste. Comparison of properties with conventional fuels. Power generation using waste to energy technologies. Waste to energy options: Type of thermo chemical conversion route of biomass, Direct combustion, Liquefaction, Gasification, Pyrolysis. Biochemical Conversion process, Anaerobic digestion, Fermentation, Composting. Briquetting technology: Production of solid recovered fuel (SRF) from waste and briquetted fuel. Comparison of properties of fuels derived from waste to energy technology with conventional fuels.

5. Marc J. Rogoff, and Francois Screve, *Waste-to-Energy: Technologies and Project Implementation*, (3e), Academic Press, 2019.

ME6250: ENERGY, ENVIRONMENT AND CLIMATE CHANGE [3 0 0 3]

Role of energy in economic development and social transformation. Energy and GDP, GNP and its dynamics, Impact of energy on economy, Energy sources and overall energy demand and availability. Future energy options: Sustainable development, Energy crisis, Transition from carbon rich and Nuclear to carbon free technologies. Environmental impacts of energy technologies: Limitations of traditional energy technologies, Criteria for the selection of new energy sources, Environmental degradation due to energy production and utilization, Fallout from nuclear explosions, Fuel processing and Radioactive waste. Global climate change: Causes and consequences of global warming, Ozone hole and consequence of ozone depletion, Montreal protocol, Kyoto protocol and Recent conventions. Climatic considerations in industrial locations, City planning, Landscape architecture and Abatement/mitigation of pollution, Strategies for conservation of environmental changes induced by CO₂ rise.

ME6251: BIOMASS GASIFICATION & PYROLYSIS [3 0 0 3]

Historical background to solid waste conversion and motivation, Biomass characteristics, biomass handling, Pyrolysis and torrefaction, Tar production and destruction. Gasification theory and Modeling of gasifiers, Design of biomass gasifiers, Hydrothermal gasification of biomass. Production of synthetic fuels and chemicals from biomass. Current development and new frontiers and challenges in gasification and pyrolysis technologies.

ME6253: WIND AND HYDRO ENERGY SYSTEMS [3 0 0 3]

Wind machine classification, General theories of wind machines, Basic laws and concepts of aerodynamics, Description, and performance of the horizontal-axis wind machines and vertical-axis wind machines. Generation of electricity by wind machines, case studies. Wind energy conversion system (WECS) siting, Rotor selection, Annual energy output (AEO). Synchronous and asynchronous generators and loads, integration of wind energy converters to electrical networks, inverters. Overview of micro mini and small hydro, Site selection and civil works, Penstocks and Turbines, Speed and Voltage regulation, Investment issues, Load management and Tariff collection, Distribution and Marketing issues, Case studies, Wind and Hydro based stand-alone/hybrid power systems, Control of hybrid power systems, Wind diesel hybrid systems.

ME6132: ENERGY LAB-1 [0 0 4 2]

Preparation of biodiesel and determination of its physical properties. Elemental characterization of a fuel using CHNS(O) analyser. Study of performance characteristics of a diesel engine fuelled with different diesel-biodiesel blend. Study of performance characteristics of a spark ignition engine fuelled with alcohol-gasoline blend. Analysis of engine exhaust emission measurement using AVL DIGAS 444 analyser and AVL 437 Smoke meter. Solar radiation measurement.

2. S.S. Thipse, *Alternative Fuels*, Jaico Publishing House, 2010.

ME6232 ENERGY LAB-II [0 0 4 2]

Solar Radiation Data Monitoring and Analysis: Sunshine hour duration, Direct solar radiation, Global solar radiation, Diffuse solar radiation, Net radiation [W/m²], Outgoing radiation [W/m²], Infra-red radiation, Diffuse radiation from global and direct radiation at a given zenith angle. Solar Photovoltaic:

Current-voltage characteristics of solar cell, Efficiency variation of solar cell, Performance variation of solar photocell at different light intensities, Determination of power produced by a solar photo voltaic system. Performance evaluation of a solar photo voltaic lighting system and its components: inverter, charge controller and battery, Performance evaluation of a solar photovoltaic water pump. Performance testing of solar cooker with and without energy storage system. Experiment on wind turbine generator. Determination of proximate analysis (Moisture content, Ash, Volatile matter & fixed carbon) for a Given Biomass Sample. Determination of Total solids, volatile Solids and calorific value for a given organic Biomass Sample. Determination of elemental analysis (chemical method) for a Given Biomass Sample.

References:

ME6233 ENERGY SIMULATION LAB [0 0 4 2]

Using PVSyst Software: Design and simulate grid-connected solar PV power plant for two sites with different latitudes under fixed tilt, seasonal tilt, and tracking, analyse average monthly performance ratio and energy production, analyse impact of thermal losses for silicon and thin film technologies, Analyse share losses for both the locations. Design and simulate Rooftop PV system for off grid application for a household. Power system simulation for engineering (PSS/E): Create and simulate an entire system in PSS/E, Determining the voltages, currents, and real and reactive power flows in a system under a given load conditions, Perform stability analysis in PSS/E. Using ANSYS FLUENT/COMSOL: Thermal energy storage related simulations. Using Design builder: To model a building. Diesel RK: Simulation of IC engines for alternate fuels.

OPEN ELECTIVE:

ME6280: LEAN AND AGILE MANUFACTURING [3 0 0 3]

Framework of Toyota production system, Introduction to value stream mapping, Characteristics of lean value stream. Introduction to Kanban, Production smoothing, Shortening production lead time, Multifunction workers, Shortening setup time concepts and Techniques. Organization structure for promoting setup time reduction, Standardization of operations, Yo-i-Don system, One shot setup, Determining the standard quantity of work in progress, Preparing the standard operation sheet. The agile production paradigm, History of agile manufacturing, Agile manufacturing vs mass manufacturing. Agile practices, Agile practice for product development, Manufacturing agile practices, understanding the value of investing in people, Concept models of agile manufacturing, Infusing managerial principles for enabling agility.
